

The Wild Center

Case Study: **The Wild Center**

Market: **Specialty Architecture / LEED**

Location: **Tupper Lake, NY**

We looked really hard at every choice LEED defined. It became clear to our team that through every choice, we could get more by using less. That means that we can spend more of our future budget on building the museum experience and less on the museum building itself.”

- Stephanie Ratcliffe, Wild Center Executive Director

The museum became the first LEED certified museum in the State of New York. Larger than the state of Massachusetts, the park is unique in its bio-diverse ecological composition, epic natural events, glacial formations, and as a sociopolitical model that showcases how humans and nature can coexist.

A Closer Look...

The Wild Center/Natural History Museum of the Adirondacks in Tupper Lake, NY was nearing completion when the owners decided they wanted the museum to be “green” because of its natural history and Adirondack location. Already working with Comfort Systems USA – Syracuse, the owners asked to modify the HVAC systems to LEED® standards. The CSUSA team:

- Helped create a productive, healthy indoor environment for the museum
- Did their part so that the building achieved LEED Silver certification
- Later contracted with the museum to put on a garage addition with solar panels

Solutions

Comfort Systems USA – Syracuse was originally awarded a \$1,950,000 contract to be The Wild Center’s HVAC, sheet metal and insulation installation partner. When they received the order to make the building more “green,” CSUSA modified the HVAC systems with air monitoring points and duct changes.

The Wild Center was so pleased with Comfort Systems USA – Syracuse’s work that they later contracted with them for a garage addition to the museum with solar panels and a life support system for the fish and turtle ponds.
