

Building Automation Services

Innovative, manufacturer-independent control solutions

With a nationwide network of controls expertise, Comfort Systems USA delivers more than \$100 million in building automation solutions every year, making us the largest manufacturer-independent controls provider in the industry. From initial evaluation, through design, installation, and on-going service, Comfort Systems USA is prepared to be your Building Automation Services partner, offering building automation solutions including:

- Building Automation System (BAS) needs assessment
- Control system design and optimization
- Design-build installation
- Systems integration
- Internet and Wide Area Network (WAN) based solutions
- Construction management
- Commissioning
- Operator training
- Remote monitoring and diagnostics

When you are ready to evaluate the economic feasibility of building automation system renovations, or determine the likely impact of advanced control strategies for new facilities Comfort Systems USA can help. Whether the project involves energy engineering to determine the most effective energy saving measures, or developing a master plan for open systems integration, Comfort Systems USA has the technical knowledge, and practical project experience, to get the job done.

Whatever your systems preference, Comfort Systems USA offers building automation system products that span nearly every major supplier in the marketplace. This means that we can evaluate several options for meeting your unique building automation needs. We provide control solutions for commercial as well as industrial facilities.

If you need to combine several building system platforms, Comfort Systems USA can help. We have particular expertise integrating multiple building system disciplines, including HVAC, lighting, access control, and CCTV. In fact, Comfort Systems USA has been actively involved in defining BACnet and LonTalk standards as well as web-accessible and Internet-based solutions; the technologies that are the foundation of today's open systems architectures. When your integration needs extend beyond operation to building management, Comfort Systems USA can assist you in sharing critical building data with other enterprise-wide business systems.

Our work is not finished when construction is complete. Comfort Systems USA provides systems service and maintenance to be sure that your investment in a building automation system continues to reap benefits. We provide a variety of service options, including re-commissioning of existing systems and a staffed 24/7 monitoring center.

Comfort Systems USA has provided groundbreaking control solutions for major commercial, institutional and industrial clients across North America. Let us assist you to address your unique building automation and control challenges. Contact a Comfort Systems USA representative today to explore our full range of Building Automation Services.
