

Retrofit/Renovation Projects

Project solutions according to individual goals

Comfort Systems USA will work with you and your staff to provide solutions that meet your unique business goals while achieving the highest industry standards. Since Comfort Systems USA is not an equipment manufacturer, we are able to select the best equipment for your application based on your specific requirements. We produce accurate computer simulations of our proposed mechanical solutions focusing on installed costs and operating costs. We then determine the impact that alternative designs would have on the business by comparing the cash flows that result from each alternative evaluated. We ensure that your best interests are met for equipment selection, warranty application, and serviceability of your project.

There is so much more that goes along with a retrofit or renovation project. It's not just about the design and execution of the work and adherence to the specification. The other components we focus on during the execution of all our projects are:

- 1) Jobsite safety
- 2) Reducing the buildings energy consumption through mechanical improvements
- 3) Improving employee attendance and comfort through system design
- 4) Reducing repair expense through reliable equipment selection
- 5) Identifying other equipment or components that may need service or replacement

Whether you need to replace a single rooftop unit, chiller plant, cooling tower, boiler, plumbing systems, ductwork, hydronic piping or a total building system upgrade, Comfort Systems USA has the experience and capabilities to provide the right solution for you.

Contact us to determine how we can service your business.
